Why not let us do the hard work?

Our project specification service is FREE to all of our customers. All you need to do is choose the style of ironmongery you are interested in, give us the plans for your project and we'll do the rest. All ironmongery is chosen to match your specification and budgetary requirements. Our trained staff will ensure that all hardware is compatible to save you time installing. All hardware is specified according to current

Master Keying Service

- In-house master keying service.
 - Master key suites are used in public and commercial buildings where access needs to be controlled. AC Leigh have the technology to create master key suites in-house. Unlike others who would have to send your locks away, AC Leigh can consult you every step of the way, and deliver your locks according to your time constraints.
 - There are two main categories of master key system, 1 - Master Key System - each lock differs from each other but are all capable of being operated by the 'master key'. 2 - Grand Master Key System - Offer more in-depth control over the lock system. This is an extension of the master-keyed system where each lock has its own individual key and the locks are divided into 2 or more groups. Each lock group is operated by a master-key and the entire system is operated by one grand master-key.
- Please speak to a member of our sales team for more details on our master keying service.

Cylinder Keywords & Specification

- Measured from front edge to centre of the cam, centre of the cam to back edge. For example a 70mm total length cylinder could be 35/35mm or 30/40mm. The measurement is displayed as the total length, then the measurement to the cam. this description '70mm total length 35/35', is a 70mm cylinder with a measurement to the cam from the front of 35mm and from back of 35mm.

Do any of these statements apply to you

- I need to restrict access through external doors.
- I'd like to use the same key on all doors throughout the building.
- I'd like to be able to easily change which doors people can operate.
- I'm tired of losing keys, I'd like to replace them easily at minimal cost.
- I need to know that lost keys won't compromise security.
- It would be helpful if I could control times and dates in which keys can operate.
- I would like a record of when any key is used.
- I'd like certain doors to automatically lock and unlock at set times without having to physically walk around the building.
- I'm worried that access control isn't as reliable or secure as keys.
- I don't want the upheaval caused by installing wiring.
- I've thought about access control, but it is too expensive.

If so, you need SALTO!!!

The problem with conventional master key systems is that they are permanent, once the locks are assembled and the keys cut they will always operate at all times, there is very little you can do to change things.

SALTO allow you the user, to change anything, add/delete users, and allow access to additional doors, control times and areas. Create your own master key system. Who, can go where, and when - You Decide.

more than you imagined - for less than expected.
