CONTROL THE ACCESS TO DRUGS

The dispensing of drugs to patients is a very important issue and as so recently demonstrated even the most trustworthy people become suspect.

The standard key locking method is very insecure and gives no indication of who has had access to the drugs. The Salto security cabinet lock only allows authorised access and only at authorised times and will give an audit trail of the user, date and time of opening.

SALTO SECURITY CABINET LOCK

The Salto security cabinet lock is operated by MIFARE proximity carriers which can be cards, tokens or wrist bands.

It is extremely easy to use and there is a record of who unlocked and locked the unit.

Easy to install and controlled by simple software, its an ideal solution to ensure only the correct people have access and only at the correct times.

THE SALTO RANGE

The Salto security cabinet lock is only a small part of the extensive Salto locking range, already the main access control system for universities, schools, police authorities and many commercial operations, Salto can offer the complete locking solution. The Salto platform can provide a very cost effective way of controlling user access rights without the high maintenance costs and low security of key systems.

XS4 Proximity Handle

Euro Cylinder

Panic Bar
